Assumptions

1. The street number should be recorded alongside the street name.
2. World Cruises (WC) would insert an entry into the MANIFEST table when a customer makes a booking.
3. We don't need to identify which entry in the CRUISE_PORT table specifically represents a first departure or a last arrival. (I am using cruise port to identify the departure location)
4. We don't need to record what kind of services are offered for a specific cabin entity.
5. We need to record the arrival and departure time for each port in a cruise if the cruise visits more than one port.
6. A ship is operated by only one operator at any one time.
